			Total VIO: 4,989,805

ETE Reman 6R80:

- Wear-prone rear stator bushing completely replaced to prevent failure of the E clutch.
- Each valve body is remanufactured and vacuum tested to verify hydraulic control.
- Valve body accumulator dampers are replaced to combat known deterioration of the OE component.
- Fully remanufactured torque converter is tested for leaks, lock-up, concentricity, and balance. Upgrades exceed OE requirements and eliminate the possibility of front seal leaks, premature bushing wear, and vibration.
- All wear-prone valves in the completely remanufactured valve body are restored to stringent specifications and vacuum tested to verify proper function.
- Build specifications are checked by four different specialized technicians during the remanufacturing process to verify the correct application.
- Every transmission is cold-and hot-tested using a proprietary dynamometer testing program that includes fully synthetic automatic transmission fluid and a filtration system.
