

ENGINES *From* ETE

Product Updates & Highlights!

Getting Better Everyday!

- Teardown: Each Engine is disassembled to the bare block, with each component scrutinized to meet strict OEM standards.
- Reclaimed 5 C's: Only the Cylinder Block, Cylinder Head, Crankshaft, Connecting Rods, Camshaft. Everything else is new including seals, valves, and lifters.
- Cleaning and Machining: Skilled technicians, along with state-of-the-art machinery, help create the industry standard for cleaning and machining in engine remanufacturing.
- OEM Defects Resolved: Any known defects of the original parts are updated during the remanufacturing process.
- Testing: All Long Blocks are 100% spin tested prior to shipment. Testing procedures include verification of proper pumping, engine performance, oil pressure, and oil analysis.
- Best In Class Warranty: All engines come with installation gasket sets and best in industry 3 year/unlimited mile warranty.

Around here, the phrase “like new - only better” is more than a philosophy. It’s how we approach each step of our remanufacturing process, even down to the smallest custom part. Where there’s an opportunity to improve the quality of an original part, we take it. Some might call that going above and beyond. We call it going the extra mile after mile.
